

Oxford Club – “America Fell” Promo

Subject:

- China’s Strategic Plan to Cripple America
- How America’s Economic System is Going to Collapse

You’ve probably heard about the on-going threat of China invading Taiwan. . .

Which would be disastrous for every country across the globe including the US.

Why is this the case?

Because our leaders fell asleep at the wheel for the last two decades and allowed 92% of the world’s microchips be manufactured in Taiwan.

A China invasion would bring the US supply to everything we use on a daily basis to a screeching halt – including. . .

Smartphones. . .

Car factories. . .

Appliances. . .

Air traffic control. . .

Computers that control the internet and electrical grid. . .

And our entire military leaving us defenseless against foreign attacks.

This imminent threat sprung US chipset makers to take massive action and ramp up production.

. . . including three of the largest US chip manufacturers Micron, IBM and Intel. . .

Who are also investing over \$200 billion dollars to expand quickly. . .

And prevent China from crippling the lifeblood of our economy.

I’ve uncovered a tiny \$32 company I believe will surge over 525% in the next few years. . .

Because it has a strong hold on the entire manufacturing process – microchips cannot be made without this.

I will reveal to you what this is, and where to invest for big returns.

But don’t wait long. Because Wall Street is already piling money into this tiny company.
